Name of subject	Energy audit of electrotechnological processes of industrial					
Name of Subject	enterprises (ECTS 8)					
Subject/module code	SKEJEA26708					
Science taught semester (s).	6 <sup>th</sup> and 7 <sup>th</sup> semesters					
Responsible teacher	Nazarov Furkat Daminovich, PhD., senior teacher.					
Education language	Uzbek					
Connection to the	Flootivo					
curriculum						
	Total hours-240.					
Training hours (this	Audience Training hours – 96					
including independent	Lecture training hour $-48$					
education)	Laboratory training hour – 24					
,	Practical training hour – 24					
ECTS	Independent education -144 hours					
The purpose and tasks of subject / learning outcomes	of rational use of energy, standardization of consumption by energy form, energy conservation management, use of secondary energy resources, and the implementation of energy conservation policies in practice.					
	The task of the discipline is to evaluate methods for controlling current energy consumption at a facility, study energy management processes and practices, energy management information systems, energy audit methods, develop measures to increase energy efficiency, and study their feasibility.					
	1. Study the history and prospects of the development of the electric power system					
	2. Get acquainted with the role and socio-economic significance of electric power in society					
	3 Study the state policy of the energy sector and its development					
	trends and prospects in the country and the world.					
	4. To have an idea of systematic analysis in solving organizational					
	and technical issues in managing the energy sector of industrial enterprises.					
	5. Study of key performance indicators for various types of energy					
	devices and opportunities for their improvement.					
	6. Economic assessment of service quality and its competitiveness by					
	type of energy devices.					
	7. Knowledge of and ability to use the main legal and regulatory					
	documents available in the field.					
Course content (topics)	I. Main Theoretical Part (Lecture Sessions)					
	<b>Topic 1:</b> Goals and objectives of instrumental energy audit at industrial					
	enterprises					
	<b>Topic 2:</b> Types and methods of measurements in instrumental energy					
	<b>Topic 3:</b> Insulators and line fittings. Cable structure and cable lines. <b>Topic 4:</b> Standardization of electrical energy consumption at industrial					
	enterprises					
	Topic 5: Current state of energy consumption. Statistical reports.					
	<b>Topic 6:</b> Direct measurement of energy and energy carrier consumption <b>Topic 7:</b> Partial and indirect measurement of energy and energy carrier					
	consumption parameters <b>Topic 8:</b> World experience in the application of new energy-saving					
	<b>Topic 9:</b> Assessment of electricity consumption by lighting systems					

and electrical appliances

**Topic 10:** Assessment of electricity consumption by air conditioners and office equipment

**Topic 11:** Calculation of heat energy consumption by consumers

**Topic 12:** Energy balance and its types

**Topic 13:** Methods and equipment for conducting energy audits

Topic 14: Definitions for heat and electricity

Topic 15: Calculation of electricity consumption by consumers

Topic 16: Accounting for natural gas by consumers

**Topic 17:** Heat and gas supply systems of industrial enterprises

**Topic 18:** Energy saving due to reactive power compensation

Topic 19: Cross-sectional audit of energy consumption

**Topic 20:** Analysis of the efficiency of energy consumption at the facility

**Topic 21:** Definition of enterprises and buildings

**Topic 22:** Feasibility study of energy-saving measures

**Topic 23:** Development of energy-saving recommendations

**Topic 24:** Analysis of energy use by the end consumer.

**II.** Instructions and recommendations for organizing laboratory exercises.

In laboratory exercises, students develop practical skills and competencies in various indicators of processes in Energy audit of electrotechnological processes of industrial enterprises, conducting experiments, calculating and drawing tables and graphs. The recommended topics are selected based on opportunities and conditions.

**Recommended topics for laboratory work:** 

1. Energy saving reserves and energy saving measures in various sectors of industry

2. World experience in the application of new energy-saving technologies in industry

3. Power supply system of industrial enterprises

4. Determination and adjustment of the efficiency of heat exchange devices used in industry

5. Heat and gas supply systems of industrial enterprises

6. Compilation of exergy balances of heat-consuming devices

7. Thermal schemes and efficiency of modern steam and gas plants.

8. Settlement with consumers for electricity at a flat rate

9. Correct selection of electric motors by power

10. Saving electricity using reactive power compensation

11. Examples of compiling an energy audit report

12. Calculation of the technical and economic efficiency of energysaving measures.

## **III.** Practical training instructions and recommendations

The teacher's preparation for a practical training session begins with the study of preliminary documents (curriculum, thematic plan, etc.) and ends with the development of a lesson plan. The teacher should have an idea of the goals and objectives of the practical training session, the amount of work that each student must perform.

Methodological guidelines are the main methodological document of the teacher in preparing and conducting practical training sessions.

The purpose of the practical training session is to understand the theory, acquire skills. It is to consciously apply it in educational and professional activities, and to develop the ability to confidently form one's own point of view.

The following topics are recommended for practical training:

1. Application of new energy-saving technologies in industrial heat supply systems

2. Assessment of energy consumption by electric heating and cooling

	1 '
	<ul> <li>3. Assessment of energy consumption by steam heating devices</li> <li>4. Steam-gas device with steam spraying</li> </ul>
	5. Energy efficiency in industry 6. Heat supply in compressor equipment utilization devices
	7. Energy saving in the gas industry
	8. Energy saving in boiler houses
	9. Operating modes of boiler plants
	10. Energy saving in heat supply systems
	11. Reducing heat loss through the use of double-chamber windows
	12. Infrared heating system for industrial facilities.
	IV. Independent learning and independent work.
	Independent learning competence serves to support students'
	independent self-development and increase the effectiveness of
	professional activities. Students perform independent work on their
	mobile devices under the guidance of a teacher in a traditional or
	Decommon ded tenies for index or deut study.
	1 Comparison of energy consumption data
	1. Comparison of energy consumption data
	2. Cross-sectional energy consumption audit
	3. Analysis of energy consumption efficiency at the facility
	4. Description of the enterprise and buildings
	5. Feasibility study of energy saving measures
	6. Development of energy saving recommendations
	7. Analysis of energy use by the end consumer
	8. Energy distribution and energy conversion
	9. Development and evaluation of energy consumption improvement
	projects
	10. Energy saving in heat supply systems
	11. Saving electricity using reactive power compensation
	12. Feasibility study of energy saving measures
	13. Development of energy saving recommendations
	14. Analysis of energy use by the end consumer
	15 Energy distribution and energy conversion
	16. Development and evaluation of energy consumption improvement
	projects
	17. Energy saving in heat supply systems
	18. Reducing heat loss through the use of double-chamber windows
	19. Energy saving in electrical networks.
Exam form	Written
Teaching/learning and	Complete mastery of theoretical and methodological concepts and
examination requirements	practical knowledge of the discipline, the ability to correctly reflect the
-	results of analysis, independently reason about the processes being
	studied and carry out tasks in the current, intermediate forms of control
	and independent work, pass written work on the final control.
	When drawing up final exam questions, deviations from the content
	of the discipline program are not allowed. The bank of final exam
	questions for each discipline is discussed at the meeting and approved
	by the head of the department
	No later than 1 week before the start of the final control tickets
	signed by the head of the department analoged in an anyalone are
	saled by the Dean's office and encoded 5 minutes before the start of the
	scaled by the Dean's office and opened 5 minutes before the start of the
	exam in the presence of students. Final exam duration is 80 minutes.
	Answers to final exam questions are recorded in copybooks with the seal
	of the Dean's office. After completion of the final work, the work is
	immediately encrypted by a representative of the Dean's office, and the
	copybooks are handed over to the commission for verification. From the
	moment of completion of the final exam, a period of 72 hours is allotted

	for checking and posting the results on the electronic platform. The teacher who taught the students in this discipline is not involved in the process of conducting the exam and checking the students'
	answers.
	Student(s) who are dissatisfied with the final exam results may
	submit a written or oral appeal within 24 hours of the publication of the
	final exam results. Complaints submitted after 24 hours from the
	publication of the final exam results will not be accepted.
Scope of assessment	CURRENT CONTROL
criteria and procedure	Purpose: Determining and assessing the student's level of knowledge,
	practical skills, and competencies on course topics.
	through the student's mastery of course topics, as well as constructively
	interpreting and analyzing the educational material developing module-
	specific skills acquiring practical skills (in terms of quality and the
	specified number) and competencies, solving problem situations aimed
	at applying professional practical skills, working in a team, preparing
	presentations, etc.
	Current control form: Activity in lessons Preparing educational
	materials Working with sources within the subject Using educational
	technologies Working in a team Preparing presentations Working with
	projects.
	MIDTERM CONTROL
	Purpose: Assessing the student's knowledge and practical skills and
	level of mastery of lecture material after completing the relevant section
	Form and procedure of intermediate control: Midterm examination is
	held during the semester during the training sessions after the
	completion of the relevant module of the curriculum of the subject.
	Midterm examination is held once in written form within the framework
	of this subject. Midterm examination questions cover all topics of the
	subject.
	INDEPENDENT LEARNING
	Purpose: Independent learning is aimed at fully covering the content
	of this course, expanding the theoretical knowledge acquired, and
	Establishing independent learning activities for students.
	assignments are completed in the form of an educational project
	presentation case study problem solving information search digest
	colloquium, essay, article, abstract, etc. Completed assignments for
	independent study are placed in the electronic system and checked based
	on the anti-plagiarism program and evaluated by the subject teacher.
	In this case, the uniqueness of the completed assignment should not
	be less than 60%, otherwise the assignment will not be accepted for
	assessment. The number of independent work assignments, depending
	on the nature of the subject, should not be less than 3 for one subject
	(module). Independent work assignments account for 60% of the points
	FINAL CONTROL
	Purpose: The final examination is held at the end of the semester to
	determine the level of mastery of the student's theoretical knowledge and
	practical skills in the relevant subject. The final examination is held at a
	specified time according to the examination schedule created by the
	Registrar's Office on the electronic platform.
	Requirements: The student must have passed the current control,
	intermediate control and independent learning assignments by the
	deadline for the final control type in the relevant subject. A student who
	has not passed the current control, intermediate control and independent

	learning assignments, as well as who has received a score in the range of "0-29.9" for these assignments and control types, is not included in the final control type. Also, a student who has missed 25 percent or more of the classroom hours allocated to a subject without a reason is excluded from this subject and is not included in the final control type and is considered not to have mastered the relevant credits in this subject. A student who has not passed or was not included in the final control type and has received a score in the range of "0-29.9" for this type of control is considered to be an academic debtor. Final control form: The final examination in this subject will be conducted in written form. If the final examination is conducted in written form, the requirements for assessment must also be reflected							
Criteria for assessing	5 100 Assessment criteria					eria		
student knowledge	gr	5	90-100	Excellen	t	When a student is considered to be able to make independent conclusions and decisions, think creatively, observe independently, apply the knowledge he has gained in practice, understand, know, express, and narrate the essence of the subject, and have an idea about the subject		
		4	70-89,9	Good		When the student is considered to able to observe independently, app the knowledge he has gained practice, understand, know, expre- and narrate the essence of the subject and has an idea about the subject.		sidered to be idently, apply s gained in now, express, of the subject, subject.
		3	60-69,9	Satisfacto	ry	When the student is found to be able apply the knowledge he has gained practice, understands, knows, express, and narrate the essence of subject, and has an idea about subject.		d to be able to has gained in knows, can essence of the ea about the
		2	0-59,9	Unsatisfact	ory	When it is determined that the student has not mastered the science program, does not understand the essence of the subject, and does not have an idea about the science.
